

**Q: What is VEMMA?**

A: VEMMA is a great tasting, complete liquid nutrition and antioxidant program. Contained in VEMMA is:

- \* Full spectrum of antioxidant vitamins.
- \* Whole fruit Mangosteen and Pericarp (nutrient rich outer shell).
- \* Organic Glyconutrient-rich Aloe Vera.
- \* Decaffeinated organic Green Tea.
- \* Over 65 major, trace and ultra-trace plant-sourced minerals.

**Q: What does VEMMA stand for?**

A: VEMMA is an acronym for Vitamins, Essential Minerals, Mangosteen and Aloe. It also contains decaffeinated green tea.

**Q: What is Verve!?**

A: When you're looking at what an energy drink has inside, size matters! With Verve!, the facts panel on the back of each can is like nothing you've ever seen on an energy drink before. This delicious fizzy drink is packed with vitamins, plant source minerals, phytonutrients from exotic stuff like the hugely popular mangosteen fruit, organic aloe and organic green tea along with an energy blend that gives you the quick kick you're looking for in a formula that won't let that energy crash blindside you. You'll be good to go for hours on one can! Our secret isn't just in the impressive list of ingredients, it's how we get them in the can. Some would tell you 'ancient Chinese secrets', we call it our secret weapon... Dr. Y. This isn't some James Bond character, it's Vemma's MD from China, Yibing Wang. He already created the world's most powerful liquid antioxidant formula in Vemma®. Now using his vast knowledge in wellness formulations and manufacturing, Verve! will have you kicking it like Bruce Lee in no time! You see, it's not that easy to protect all the good stuff inside Verve! However, Dr. Y found a way to maintain the delicate phytonutrients, minerals and vitamins in Verve! right up to the moment of consumption using a special proprietary process and protective can lining. It really is the world's healthiest energy drink!

**Q: What else should I know about Verve!?**

A: Verve! utilizes a cold-fill process for bottling and pasteurization. What that means is that unlike other energy drinks that are boiling hot when canned, Verve! is near freezing when bottled. What does that mean to you? Simply stated when a boiling hot energy drink makes contact with a tin can, it will create carcinogens which are body damaging free radicals.

**Q: What is Mangosteen and why do I need it?**

A: Mangosteen is a rare, tangerine-sized fruit, whose growth is limited primarily to tropical Southeast Asia, has strict growing conditions, and has only recently been made available in North America. Mangosteen is thought to have been traditionally used by natural health providers for thousands of years. In India, for example, traditional ayurvedic doctors used the rind of Mangosteen to support a healthy digestive system. Modern day science has recently begun to appreciate the incredible, nutrient-rich value of Mangosteen and its wide-reaching, health-promoting properties. We now know, for example, that Mangosteen contains a number of vitamins and minerals in trace amounts. Mangosteen also contains the following compounds: polysaccharides, quinones, stilbenes and xanthenes. This combination of plant compounds is unique.
